A;Note: the list of introns may be incomplete
A;Note: gene is located in the major histocompatibility complex, class III region
C;Complex: complement factor B initially forms an inactive complex with complement factor C3b forming active C3/C5 convertase; Ba is released

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            DB seq

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  The present sequence is the protein sequence of a human surface-bound anthrax toxin receptor (ATR), as predicted from an isolated cDNA clone. Anthrax toxin protective antigen (PA) binds to the ATR at a von Willebrand factor A domain located in the extracellular domain of ATR. The invention provides ATR polypeptides and polynucleotides, vectors, host cells, and transgenic and knock-out animals. It also provides methods for identifying molecules that bind the ATR and which reduce the toxicity of anthrax toxin. A claimed method for treating anthrax in a human or animal involves administering an agent that inhibits binding between PA and ATR at a level effective to reduce the severity of anthrax. Suitable agents include ATR or a PA-binding fragment of ATR, a PA-binding polypeptide at least 80% identical to these, a fusion protein, a monoclonal or polyclonal antibody, a polysaccharide, a lipid or a

AAD05300-AAD05379 represent cDNAs corresponding to 28 human secreted CC AAD05301-AAD05379 represent human secreted proteins they encode. CC AAB01514-AAB01544 represent human secreted protein fragments or variants. CC The genes and their secreted proteins are useful for preventing, treating cor ameliorating medical conditions, e.g., by protein or gene therapy. CC pathological conditions can be diagnosed by determining the amount of the new protein in a sample or by determining the presence of mutations in CC the new genes. Specific uses are described for each of the 28 genes, the new genes. Specific uses are described for each of the 28 genes, cadeveloping products for the diagnosis or treatment of proliferative CC disorders, cancer, tumours, foetal and developmental abnormalities, can disorders, cancer, tumours, foetal and developmental abnormalities, communosis (e.g., rhemmatoid arthritis), inflammation, allergies, autoimmune constitute disorders (e.g., Alzheimer's disease, Parkinson's disease), cognitive disorders, schizophrenia, asthma, skin disorders (e.g., pregnancy-related disorders, atherosoclerosis, cardiovascular disorders, gregnancy-related disorders, and combeton, and infections. The proteins can also be used to aid wound healing and epithelial cell correspondents, and infections. The proteins can also be used to aid wound healing and epithelial cell correspondents, and inchmotary tissues, to regenerate tissues, to identify their cognate ligands or binding correspondents, and in chemotaxis, and can be used as a food additive or prace properties and pribadies generific for a properties and inchmotaxis, and can be used as a food additive or prace properties.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                WPI; 200

                     The present invention relates to albumin fusion proteins comprising a therapeutic protein X and human albumin (HA, also known as human serum albumin, HSA). The proteins are useful for treating a disease or disorder that may be modulated by therapeutic protein X. The albumin extends the shelf-life of protein X, and may increase its biological in vitro/in vivo
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  human serum albumin; HSA; cancer; reproductive disorder; digestive disorder; immune disorder; endocrine disorder; haematopoietic disorder; neural disorder; connective disorder; cytostatic; antiinfertility; antiinflammatory; antiulcer; cytostatic; anti-HIV; antidiabetic; haemostatic; nootropic;

SEQ ID NO 621; 279pp; English.
```

CC fragment or variant; a nucleic acid molecule comprising a polynucleotide comprising the albumin fusion protein; a vector comprising the nucleic acid molecule of the albumin fusion protein; and a host cell comprising the nucleic acid molecule of the albumin fusion protein. The CC albumin fusion protein and its compositions have the following cc activities: cytostatic, antianaemic, antiarthritic, antiarthratic, antiparting, antispendic, nephrotropic, uropathic, cc ardiant, nootropic, antilipaemic, nephrotropic, uropathic, anabolic, hypertensive, and vulnerary. The albumin fusion protein antiarthratic, anabolic, hypertensive, and vulnerary. The albumin fusion protein and colon, because of albumin fusion protein is cc useful for disgnosing, treating, preventing or ameliorating diseases or disorders comprising indication: Y. The diseases or disorders include: cc ancer (e.g. leukaemia, colon, bone, breast, liver or lung cancer), cc lamune or haematopoietic diseases (e.g. anaemia, Hodgkin's disease, acute lymphocytic anaemia, multiple myeloma, arthritis, asthma, AIDS, cc laydig tumours, musculoskeletal disease, psoriasis or Lyme CC laydig tumours, musculoskeletal disease, cy, giant cell tumours, actemic lunguar dystrophy stemic and disease, seventender and disease, acute and adenocarcinoma or Sertoli-Sachs disease), excretory diseases (e.g. urinary incontinence, urinary tract infections or renal disorders), neural or sensory disease (e.g. Alzheimer's disease, Parkinson's disease, cerebral malaria, meningitis, cerebellar ataxia, attention deficit disorder, autism or obsessive compulsive disorder), respiratory disease (e.g. emphysema, lung cancer or occupational lung disease), endocrine diseases (e.g. diabetes, Addison's disease or glomerulonephritis), digestive diseases (e.g. portal hypertension, irritable bowel disease, gastric atrophy or pancreatitis) or connective tissue or epithelial diseases (e.g. Crohn's disease, sclaroderma, wound healing or epitermolysis bullosa). This sequence represents a therapeutic protein X relating to the albumin fusion protein of the invention. The sequence listing data for this specification was dowloaded from the USPTO website. Paget's disease, systemic lupus erythematosus, gout, muscular dystrophy or cachexia), cardiovascular disease (e.g. rhabdomyomas, heart disease, arrhythmia, cardiac arrest, heat valve disease, hypernatraemia or hyponatraemia), mixed foetal diseases (e.g. foetal alcohol syndrome, Down's syndrome, Patau syndrome, Turner's syndrome, Apart syndrome or Tay Sachs disease), excretory diseases (e.g. urinary incontinuous) disorder in a patient comprising the step of administering the albumin fusion protein; a method of treating a patient with a disease or disorder that is modulated by Therapeutic protein: X, or its fragment or variant; a method of extending the shelf life of Therapeutic protein: X, or its; further relates to: a composition comprising the albumin fusion protein and a pharmaceutical carrier; a kit comprising the composition of the albumin fusion protein formula; a method of treating a disease or novel albumin fusion protein. invention

                                                                  The invention relates to a novel fusion polypeptide comprising a von Willebrand factor A-like domain (vWF) amino acid sequence and an amino acid sequence heterologous to the vWF. The polypeptide of the invention demonstrates antibacterial activities whilst the composition and metho may be useful in preventing or ameliorating the symptoms of cutaneous and/or inhalation anthrax. The current sequence is that of the human TANGO 197 Ig mutated fusion protein of the invention.

                                                                                                                                                                                                                                                                ameliorating domain (vWF) to the vWF.
                                                                                          The invention describes a fusion polypeptide comprising a von Willebrand factor A-like domain (vWF) amino acid sequence and an amino acid sequence heterologous to the vWF. Also described are: a method of preventing or ameliorating a symptom of anthrax in a subject thought to be at risk for exposure to or suspected of having been exposed to Bacillus anthracis; and a pharmaceutical composition comprising the novel fusion polypeptide. The composition and method are useful in preventing or ameliorating symptoms of cutaneous and/or inhalation anthrax. This is the amino acid sequence of a fusion protein comprising mouse TANGO197 and immunoglobulin (19) that can be used to treat exposure to or prevent a symptom of
                                                                                                                                                                                                                                                                         New TANGO 197 and/or TANGO 216 fusion polypeptides for preventing or ameliorating symptoms of anthrax comprises a von Willebrand factor A-like domain (vWP) amino acid sequence and an amino acid sequence heterologous

The invention relates to an isolated molecule comprising an antibody variable region which specifically binds to an extracellular domain of a tumour endothelial marker (TEM) protein selected from ABB90730, ABB90740, ABB90749, ABB90750 and ABB90769. The antibodies which bind to TEM proteins have cyrostatic, immunostimulant and antianglogenic activity. They are useful for inhibiting tumour growth, neoanglogenesis in subjects bearing a vascularised tumour, polycystic kidney disease, diabetic retinopathy, rheumatoid arthritis and psortiasis. Human, mouse and rat TEM genes and the encoded proteins (ABL92075-ABL92141 and ABB90721-ABB90789) are disclosed, as are marker oligonucleotide sequences: tumour endothelial markers (TEM) ABL91996-ABL92041 and ABL92143-ABL92191; normal
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          antiangiogenic; tumour; neoangiogenesis; vascularised tumour; polycystic kidney disease; diabetes; retinopathy: rhawman-

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     ABB90749, ABB90750 and ABB90769. The antibodies which bind to TEM proteins have cytostatic, immunostimulant and antianglogenic activity. They are useful for inhibiting tumour growth, neoangiogenesis in subjects bearing a vascularised tumour, polycystic kidney disease, diabbtic retinopathy, rheumatoid arthritis and psoriasis. Human, mouse and rat TEM genes and the encoded proteins (ABL92075-ABL92141 and ABB90721-ABB90789) are disclosed, as are marker oligonucleotide sequences: tumour endothelial markers (TEM) ABL91996-ABL92041 and ABL92143-ABL92191; normal endothelial markers (NEM) ABL92042-ABL92044; and pan-endothelial markers

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 cc anthrax toxin receptor (ATR), previously designated TEM8, and identified CC following a database screening using a newly isolated human surface-bound CC ATR (see ABP54903). The present sequence differs from the newly isolated CC human ATR only in the cytoplasmic domain (221 rather than 25 amino acids CC long), suggesting differential splicing of a primary mRNA transcript. CC Anthrax toxin protective antigen (PA) binds to these ATRs at a von CC willebrand factor A domain located in the extracellular domain of ATR. CC The invention provides ATR polypeptides and polynucleotides, vectors, CC host cells, and transgenic and knock-out animals. It also provides CC methods for identifying molecules that bind the ATR and which reduce the toxicity of anthrax toxin. A claimed method for treating anthrax in a CC human or animal involves administering an agent that inhibits binding CC between PA and ATR at a level effective to reduce the severity of fragment of it, a PA-binding polypeptide at least 80% identical to these, a fusion protein, a monoclonal or polyclonal antibody, a polysaccharide, CC a lipid or a nucleic acid
                                                                                                                                                                                                                                                                                                                                         밁

Tumour endothelial marker (TEM), normal endothelial marker (NEM), and pan-endothelial marker (PEM) genes are identified in human ECs. The human EC marker proteins and the polynucleotide sequences encoding them are useful for detecting, diagnosing or treating tumours as well as polycystic kidney disease, diabetic retinopathy, rheumatoid arthritis, and psoriasis. They are all useful for inhibiting neoangiogenesis or tumour angiogenesis, for inducing an immune response to tumour endothelial cells in a patient, for identifying candidate drugs for treating tumours. The present sequence represents a human TEM or NEM protein of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           WPI; 200

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        The present invention relates to a novel method for the isolation of endothelial cells (ECs), and the identification of genee expressed in normal and tumour ECs. Tumour endothelial marker (TEM), normal endothelial marker (NEM), and pan-endothelial marker (PEM) genes are identified in human ECs. The human EC marker proteins and the polynucleotide sequences encoding them are useful for detecting, diagnosing or treating tumours as well as polycystic kidney disease, diabetic retinopathy, rheumatoid arthritis, and psoriasis. They are also useful for inhibiting neoanglogenesis or tumour anglogenesis, for inducing an immune response to tumour endothelial cells in a patient, or for identifying candidate drugs for treating tumours. The present sequence represents a human TEM or NEM protein of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Human; endothelial cell; EC; tumour endothelial cell; TEM; NEM; Tumour endothelial marker; normal endothelial marker; PEM; pan-endothelial marker; polycystic kidney disease; psoriasis; dlabetic retinopathy; rheumatoid arthritis; tumour angiogenesis; neoangiogenesis; immune response; cytostatic; antidiabetic; ophthalmological; antirheumatic; antiarthritic; antipsoriatic.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   New purified human transmembrane protein, designated as tumor endothelial marker (TEM) 3, useful for detecting, diagnosing or treating tumors, polycystic kidney disease, diabetic retinopathy, rheumatoid arthritis or
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Carson-Walter E,

CC This invention relates to novel mitochondrial targets that can be used CC for therapeutic intervention in treating a disease associated with CC altered mitochondrial function. Specifically, it refers to a method for CC identifying proteins of the human heart mitochondrial proteome that are CC useful for drug screening assays, as well as therapeutic targets. The CC gresent invention describes a method for identifying such proteins that CC can be used in the treatment of various diseases associated with altered CC mitochondrial function including diabetes mellitus, Huntington's disease, osteoarthritis, Leber's hereditary optic neuropathy (IHON), mitochondrial CC encephalopathy lactic acidosis and stroke (MERAS), myoclonic epilepsy capged red fibre syndrome (MERRF) or cancer. Accordingly, these CC compositions have neuroprotective, nootropic, antidiabetic, captositatic acidosit should be controled to anticoroulsant, antiatrhritic, osteopathic, ophthalmological and cytostatic activities. This polypeptide sequence is a human heart CC mitochondrial protein of the invention.

The present invention describes a method for detecting a pancreatic concer-associated transcript in a biological sample. The method comprises contacting the biological sample with a polynucleotide that selectively hybridies to a sequence at least 80% identical to a sequence as shown in any one of Tables 3 to 25 in the specification or having the GenBank CA Accession Number AP279145. Also described: (1) diagnosing pancreatic cancer in a human or animal subject being tested, determining the CC determining the subject having a pancreatic cancer will survive, or CC determining the subject having a subject having a pancreatic cancer for csurgical resection therapy; (2) detecting a pancreatic cancer-associated concer-associated transcript has cytostatic cancer. A pancreatic cancer—associated transcript has cytostatic cancer. A pancreatic cancer—associated transcript has cytostatic cancer associated transcript has cytostatic cancer—associated transcript concer-associated, a vector comprising the polynucleotide, an isolated concerning the polynucleotide, a vector comprising the polynucleotide, an isolated concerning the polynucleotide, an isolated concerning the polynucleotide.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Detecting pancreatic cancer-associated transcript in a biological sample, useful for diagnosing or treating the disease, comprises contacting the sample with a polynucleotide that selectively hybridizes to a specific
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Claim 70;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           pancreatic cancer-associated transcript; pancreatic cancer; cytostatic; gene therapy; protein therapy; tumour endothelial marker 8 precursor; TEM8.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 polypeptide or an antibody that binds to the isolated polypeptide can be used for diagnosing or prognosing pancreatic cancer or for preparing a medicament for the treatment of pancreatic cancer. The prognostic or diagnostic methods are useful for the early detection of pancreatic cancer or its metrastases, and for monitoring the progress of disease such as during remission or following surgery or chemotherapy. The present sequence represents human tumour endothelial marker 8 precursor (TEM8), which is used in the exemplification of the present invention.

CC AAD05300-AAD05379 represent cDNAs corresponding to 28 human secreted CC protein genes, and AAE01436-AAE01513 represent the proteins they encode. CC AAE01514-AAE01544 represent human secreted protein fragments or variants. CC The genes and their secreted proteins are useful for preventing, treating CC or ameliorating medical conditions, e.g., by protein or gene therapy. CC protein in a sample or by determining the amount of the comparison of the tissues in which they are most highly expressed, and include the new genes. Specific uses are described for each of the 28 genes, assed on the tissues in which they are most highly expressed, and include CC developing products for the diagnosis or treatment of proliferative disorders, cancer, tumours, foetal and developmental abnormalities, autoimmune CC diseases (e.g., rheumatoid arthritis), inflammation, allergies, autoimmune CC diseases (e.g., rheumatoid arthritis), inflammation, allergies, cCC orginitive disorders, kidney disorders, gastrointestinal disorders, candiovascular disorders, cognitive disorders, kidney disorders, gastrointestinal disorders, ccc angiogenic disorders, kidney disorders, gastrointestinal disorders, ccc proteins can also be used to aid wound healing and epithelial cell cc proteins can also be used to aid wound healing and epithelial cell cc proteins can also be used to aid wound healing and epithelial cell cc protein of the invention can be used in alleviating symptoms associated with the disorders mentioned above, and in diagnostic immunoassays e.g., cradioimmunoassays or enzyme linked immunosorbent assay (EIJSA). The invention can a house a forested invention of the invention of a human socrated protein of the invention.
                                                                                                                                                                                                                                                                                                                                                               Matches

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Albumin fusion protein; therapeutic protein X; human albumin; HA human serum albumin; HSA; cancer; reproductive disorder; digestive disorder; immune disorder; endocrine disorder; haematopietic disorder; neural disorder; connective disorder; cytostatic; antiinfertility; antiinflammatory; antiulcer; immunomodulator; anti-HIV; antidiabetic; haemostatic; nootropic; neuroprotective; antiparkinsonian; antimicrobial; neuroleptic; osteopathic; antiarthritic.
                                                           The present invention relates to albumin fusion proteins comprising a therapeutic protein X and human albumin (HA, also known as human serum albumin, HSA). The proteins are useful for treating a disease or disorder that may be modulated by therapeutic protein X. The albumin extends the shelf-life of protein X, and may increase its biological in vitro/in vivo activity. The protein is useful for treating and disgnosing disorders such as cancer, reproductive disorders, digestive disorders (e.g. Crohn's disease, ulcerative colitis), immune disorders (e.g. acquired immunodeficiency syndrome, AIDS), endocrine disorders (e.g. diabetes), haematopoietic disorders, neural disorders (e.g. Alzheimer's, reproductive disorders (e.g. Alzheimer's, entingitis, schizophrenia), and connective disorders (e.g. osteoporosis, arthritis). ABG63326-ABG65518 represent albumin fusion proteins of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  New fusion
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         12-APR-2000; 2000US-0229358P
